### **DETAILED ACTION**

1. This action is responsive to communication filed 9/10/09.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Morlock on 11/19/09.

The application has been amended as follows: Claims

1. (Currently Amended) A method for estimating a systematic relationship between a plurality of points, comprising:

receiving a signal comprising coordinate data and normal vector data associated with each point of a starting set of points from a measuring device, where the starting set comprises at least three non-linear points;

determining by a processor a first estimated relationship between the plurality of points based on the coordinate data and the normal vector data associated with the starting set of points;

determining by a processor a target point corresponding to a point having a maximum estimated error within the first estimated relationship between the plurality of points; and

obtaining coordinate data and normal vector data for the target point if the maximum estimated error is greater than a predetermined error limit.

16. (Currently Amended) A method for estimating a relationship between a plurality of points, comprising:

generating by a processor a first estimated relationship between the plurality of points based on measured coordinate data and normal vector data received from a measuring device, the measured coordinate data comprising a measured value of a vector associated with a point corresponding to a given one of the plurality of points, the normal vector data representative of a local rate of change with respect to the vector associated with the given one of the plurality of points, the first estimated relationship between the plurality of points derived from estimated normal vector data corresponding to at least a portion of the plurality of points; and

automatically determining by a processor whether further measurements are required based on the estimated normal vector data in combination with predetermined measurement criteria comprising error limitations.

19. (Currently Amended) A method of estimating a relationship between a plurality of points, comprising:

removing data from a plurality of coordinate data and normal vector data

Art Unit: 2624

associated with measured points received from a measuring device, the measured points defining a starting set associated with the plurality of points based on estimated normal vector data associated with the measured points, thereby defining a revised starting set, wherein the data is removed based on error limitations; and

~~generating~~ determining by a processor a first estimated relationship between the plurality of points based on the coordinate data and the normal vector data of the revised starting set, the coordinate data comprising a measured value of a vector associated with a point corresponding to a given one of the plurality of points, the normal vector data comprising a the local rate of change associated with the vector of the given one of the plurality of points, the first estimated relationship between the plurality of points derived from estimated normal vector data corresponding to at least a portion of the plurality of points.

### ***Response to Amendment***

3. Examiner acknowledges cancelled claims 2, 29, 25 and 31. The amendment to claims 1, 16 and 19 overcomes the 35 US 101 rejection. The 35 USC 101 rejections have been withdrawn.

### ***Allowable Subject Matter***

4. Claims 1, 3-19, 21-24, 26-30 and 32-35 are allowed.
